

## The latest exciting improvement to WebTCards: Flags to highlight Tasks

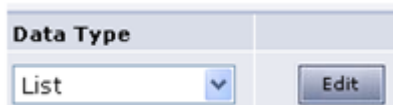

The functionality which allowed you to set Tasks to change colour has been extended.

### Current functionality:

From menu option: Design System | T Card Template:

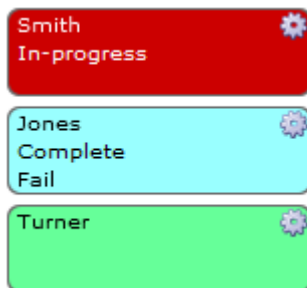

You could set a T Card line to Data Type List, click the Edit button

and, e.g. set High priority Tasks to **Red**, Normal to **Green** and Low to **Blue**

List Value	Card Colour
High	 
Normal	 
Low	 

Menu Option | Board View, illustrating 3 Task Cards:

**Improved functionality:**

From menu option: Design System | T Card Template:

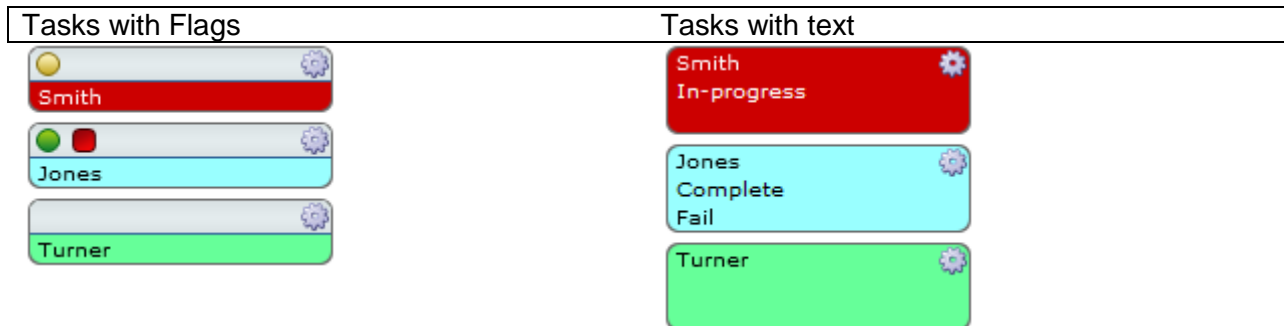

As well as Card Colours, you can select Flags, e.g.

Status:            In-progress = yellow circle:   
                          Complete = green circle: 

Quality Control:    Pass = green square:   
                               Fail = red square: 

Menu Option | Board View, illustrating same 3 Task Cards

**Hover your mouse over the flag, this displays its meaning, e.g. In-progress. After a short-time, your mind will naturally associate each shape with its meaning.**

The advantages of flags over text include: 'a picture tells a thousand words'. Being visual, flags will allow easier and faster assimilation of information. Each T Card can display up to three flags, which means more Task Cards can be visible on your planning Board.
